

Laminated Poles

Our laminated poles at Daviess County Metals are top quality and strong enough for your next project.

- They are **STRONGER** with higher design values than solid sawn timbers
- They are **STRAIGHTER** and are resistant to twist, warp or crook, making them easier to work with
- They are **LIGHTER** and usually weigh about half as solid sawn timber

Our poles have a 6' minimum of treated yellow pine lower

They are finger joint spliced 2' apart

The uppers are all a #1 yellow pine

We use a moisture resistant glue and the top 24" is unglued

Lengths available

13'7" – 39'7"

3 ply 2x6 – 3 ply 2x8 – 4 ply 2x6 – 4 ply 2x8
